

FRESH CUT VALUE ADDED PRODUCE GUIDE

FRESHPOINT - TORONTO

FRESH SOLUTIONS

We are dedicated in providing you with value-added services on processed items beyond the national processors.

Our niche is fresh, cut-to-order products, delivered to you the next business day.

BENEFITS TO YOU:

- On-site food processing facility
- Manufactured under strict HACCP and GMP standards
- Custom cut to order: duplicating any produce presentation your Chef can imagine
- 100% yield: no food waste
- Great opportunity to reduce labor costs
- Requires less storage space
- Consistent quality and cut size
- Improves food safety
- Reduces your worker's compensation exposure

PRODUCT CARE & STORAGE

To maintain top quality most products must be refrigerated.

The ideal storage temperature is between

- 0.5° - 4.4° Celsius (33° - 40° fahrenheit)
- To maintain optimum quality unused product should be stored in the pouch after removing all excess air
- The end user should practice first in/first out inventory control to prevent unnecessary spoilage
- "Skip-A-Day" requires 2 days for delivery

FOOD SAFETY:

Fresh vegetables arrive at the FreshPoint plant daily. Digital temperature-loggers, at various stations along the process, monitor temperature to ensure an optimum environment for the vegetables. Using a first in/first out inventory system assures that the vegetables are always of the highest quality available. Most of the processing and packaging is automated; however the initial most important steps are still performed by hand.

FreshPoint employs the HACCP (Hazard Analysis Critical Control Point) program. By having specific designated inspection points at each stage of the production line (receiving, preparation, processing and packaging) the end user knows that the vegetables they are using are of the best quality and perfectly safe for the consumer.

FreshPoint equipment is state of the art and manufactured from non-permeable stainless steel and food grade plastics to ensure cleanliness. Using knife peelers rather than the old abrasive method to remove skins.

FreshPoint produces more attractive and flavourful vegetables. All vegetables are washed and dewatered after processing and before packaging. Our wash sanitization system offers real-time monitoring to help prevent food borne illness outbreaks.

Since overall plant sanitation is the first step in quality, FreshPoint has a sanitation shift every day. All equipment is dismantled and sanitized on a rotating schedule.
